WEEK 1 INTERNSHIP PROGRESS REPORT

Remote Internship at FlyRank AI

STUDENT INFORMATION

University Name	University of Haripur
Student Name	Muhammad Abdullah Awan
Roll Number	F23-0332
Department	Department of Information Technology
Program	BS Artificial Intelligence
Semester	7th Semester
Company	FlyRank AI
Internship Type	Remote Internship
Internship Duration	July 2026 – August 2026 (8 Weeks)
Report Period	Week 1 (July 1 – July 7, 2026)

Submitted To:

Dr. Dawar Khan

Submitted By:

Muhammad Abdullah Awan

1. Introduction

FlyRank AI is an AI-powered organic growth platform that helps businesses improve their visibility across traditional search engines and AI answer engines such as ChatGPT, Perplexity, and Gemini. The platform automates large parts of the content lifecycle - research, scoring, and optimization - primarily serving D2C, SaaS, and agency clients who need scalable organic growth.

This report covers Week 1 of my remote Machine Learning Engineering internship at FlyRank AI, under the Applied Search Intelligence track. It summarizes the assignment completed, the reasoning behind it, and the skills developed.

2. Objective of Week 1

Objective: To understand the Machine Learning Engineering track by running a real ML pipeline on real (anonymized) search data before covering any theory, and to complete initial onboarding requirements.

3. Week 1: Onboarding & ML Pipeline Setup

Task Requirements: Set up a personal public GitHub repository from FlyRank's starter template; requested access to FlyRank's Hugging Face data warehouse; ran the first two starter notebooks end to end in Google Colab; completed the embedded hands-on discovery exercises.

Research Performed: Reviewed the repository's SETUP.md and GUIDE.md documentation to understand the folder structure and workflow; studied the reference pipeline scripts (feature preparation, baseline scoring, model training, evaluation, and reporting) to understand what each stage does and why.

Summary of Work Completed: Cloned the starter repository and ran the full pipeline on a 30,000-row anonymized dataset. Confirmed that a trained Random Forest model outperformed a hand-written baseline rule at ranking pages for review, with Precision@50 improving from 0.240 to 0.740 (roughly a 3x lift). Completed guided pandas exercises uncovering real patterns in the data, such as search volume having almost no correlation with actual page traffic. Also completed four Anthropic (Claude AI) certifications offered through the internship portal - Claude 101, Claude Platform 101, Claude Code 101, and Claude Code in Action - to strengthen my ability to work effectively with AI-assisted development tools.

What Was Learned: Gained a working, end-to-end understanding of the ML workflow: problem framing, baseline construction, model training, and honest evaluation. Learned why client-holdout validation matters - ensuring a model is tested only on clients it has never seen - to avoid inflated, misleading results.

4. Skills Developed

Week 1 contributed to the development of the following technical, analytical, and professional skills:

Skill	Description
ML Pipeline Fluency	Ran and interpreted a full machine learning pipeline end to end - feature prep, baseline scoring, model training, and evaluation.
Version Control (Git/GitHub)	Set up and maintained a public GitHub repository as the workspace and submission record for all future assignments.
AI-Assisted Development	Completed four Anthropic certifications, strengthening the ability to use Claude and Claude Code effectively in real development workflows.

5. Challenges Faced

- › Mobile-only workflow: Running Colab notebooks and managing GitHub commits entirely from a mobile device required learning alternate save/upload workflows.
- › Understanding the pipeline before touching code: Reading through five pipeline scripts to understand the full workflow before writing anything required patience and careful note-taking.

6. Knowledge and Experience Gained

Week 1 provided a practical, end-to-end introduction to a real ML pipeline, moving from raw data to a validated, evaluated result. This built the foundation for framing my own research question in the following week.

7. Conclusion

Week 1 of the remote internship at FlyRank AI focused on onboarding and building intuition for the ML workflow by running a real, working pipeline before any theory. The pipeline clearly demonstrated that a learned model can meaningfully outperform a hand-written rule, setting the stage for the research framing work in Week 2.

Looking ahead, the objective for the next reporting period is to select a project lane and frame a genuine research question grounded in real data evidence.
